

Replicate

The image shows a software dialog box titled "AS-ISK v2.2 - Replicate". It contains a section titled "Fields to replicate" with a list of nine fields, each with a checkbox and a text input field. The "Category*" field is checked and highlighted in yellow. The other fields are unchecked. At the bottom, there is a "Number of replicates" spinner set to 1, and three buttons: "Help", "Cancel", and "Save". A note at the bottom right states "* Required (at least one)".

Field	Value
<input checked="" type="checkbox"/> Category*	Fishes and Lampreys (brackish)
<input type="checkbox"/> Taxon name*	Belonesox belizanus
<input type="checkbox"/> Common name*	top minnow
<input type="checkbox"/> Assessor*	Laura Lee
<input type="checkbox"/> Reason and socio-economic benefits	Risk screening of potential horizon species for ROPME region.
<input type="checkbox"/> Risk assessment area*	ROPME Sea Area
<input type="checkbox"/> Taxonomy	Domain: Eukaryota Kingdom: Metazoa Phylum: Chordata Subpl
<input type="checkbox"/> Native range	Mexico
<input type="checkbox"/> Introduced range	North America, Central America and Caribbean
<input type="checkbox"/> URL	https://www.cabi.org/ISC/datasheet/91274

* Required (at least one)

Number of replicates: 1

Buttons: Help, Cancel, Save

This dialog allows the Assessor to replicate an assessment selected from the *Assessment List* in the *Main Assessment Workspace*. This option is useful when e.g. initiating one or more assessments for multiple taxa relative to a certain Risk assessment area and/or carried out by the same Assessor.

Fields to replicate

These are nine fields in total whose details can be replicated: *Taxon name*, *Common name*, *Assessor*, *Reason and socio-economic benefits*, *Risk assessment area*, *Taxonomy*, *Native range*, *Introduced range* and *URL*. At least one field marked by an asterisk (*) must be included for replication of the selected assessment from the *Assessment List* to be possible. Notably, the *Category* field is always included in the replicated assessment. In case of selection of all required fields (i.e. *Taxon name*, *Common name*, *Assessor* and *Risk assessment area*), only one replicate assessment is allowed to avoid duplication of entries. The entry for any of the required fields not included in the replicated assessment will include the ellipsis "...". If a field is selected (checked), the corresponding label is highlighted in light yellow.

Number of replicates

This control allows the Assessor to select the number of replicates for the selected assessment from the *Assessment List*. The maximum number of possible replicates is 9999 (i.e. given the maximum number of 10,000 assessments that an AS-ISK v2 database spreadsheet can include: see *Assessment List*). The number of possible replicates adjusts automatically depending upon the number of existing assessments. This control displays in light red when no replicates are indicated, and in light yellow otherwise. In case of selection of all required fields (i.e. *Taxon name*, *Common name*, *Assessor* and *Risk assessment area*), the number of replicates defaults to 1 (if any another value was previously chosen).

Help

Clicking this button opens the pdf Help file (AS-ISK_v2_Help_Replicate.pdf) for the current dialog. Note that the AS-ISK v2.2 Help files must be located in the same folder as the AS-ISK v2.2 program.

Cancel

Clicking this button closes the current dialog without performing any replication.

Save

Clicking this button generates the replicates according to the Assessor's selection. An information message is issued upon completion. Active only if at least one of the *Fields to replicate* has been selected and the *Number of replicates* has been indicated.
